Marzyme® is an enzyme produced by the fermentation of a purified culture of the fungal specie Rhizomucor miehei.
Marzyme® belongs to the group of coagulants of microbial origin.
Marzyme® is used in cheesemaking as an alternative to animal extract coagulants.

Directions for use

Conditions depend of the technology used and on the desired end product characteristics. The rennet has a double action in the cheese making process:
* Hydrolysis of the Kappa casein which gives clotting of the milk,
* Proteolytic activity during the ripening of the cheese.
The data below gives a general guideline as to the average quantities used for 100 litres of milk:

- Acidified fresh cheese: 300 - 900 IMCU
- Matured lactic curd: 1000 - 1800 IMCU
- Semi-hard cheese: 2600 - 3300 IMCU
- Stabilised semi-hard cheese, uncooked pressed: 3600 - 5200 IMCU
- Cooked pressed cheese: 2900 - 5200 IMCU
- Cheddar and Italian semi-hard cheese: 5100 - 5900 IMCU

We do not accept any liability in case of undue application.

Composition

Protease (origin Rhizomucor miehei)
Sodium chloride
Acetic acid
Sodium acetate

Properties

This product is made without preservative.
Specific proteolytic activity on the Kappa casein.
Coagulum formation.
Action on the ripening of the curd during the transformation into cheese. The recommended manufacturing parameters for the use of Marzyme® (initial gelling time, coagulation time, curd cutting, etc.) are very similar to those obtained when using rennet.

Physical/chemical specifications

Physical Properties:
- pH at 20°C (AFNOR standard NF T01.013) 5.00 - 5.35
- Density at 20°C (internal method) 1.120 - 1.150
- NaCl (density Marschall method) < 20 %
- Lipase (Food Chemical CODEX IV method) < 0.2 LFU / 100 IMCU
- Alpha-Amylase (Ceralpha method) < 0.05 CU / 100 IMCU

Biochemical specifications:
- Clotting activity (ISO 15174: 2002): >= 800 IMCU/ml
- Rhizomucor miehei protease concentration: >= 11000 mg/l

Thermolabile specification: pasteurisation of the whey from cheesemaking causes significant inactivation of the Marzyme®. Thus, residual activity after pasteurising for 20 seconds (pH 6.00 at 68°C) is 98% lower than initial activity.

Marzyme 55 PF, 25 l
Liquid Microbial Rennet

Microbiological specifications

- aerobic mesophilic total count < 1000 / ml [12]
- Coliforms < 1 / ml [13]
- anaerobic sulphite reducing spore < 1 / ml [9]
- anaerobic gas producing spore < 1 / ml [10]
- Yeasts < 10 / ml [14]
- Moulds < 10 / ml [14]
- Staphylococci coagulase positive < 1 / ml [15]
- Salmonella neg. / 25 ml [16]
- Listeria monocytogenes neg. / 25 ml [17]

Storage

Store in the original packaging in a cool, dry and dark area.
Shelf life: 12 months from production date, at a temperature between 0 °C and 7 °C.

Packaging

This product is packaged in 25 litres jerricans.
The following information appears on the labelling of products: manufacturer name, product name, net volume and net weight, batch n° and shelf life.

Quantity

Unit pack: pallet (80 x 120) containing 28 jerricans (700 litres).

Purity and legal status

Marzyme 55 PF, 25 l complies with all EU food legislations.
Marzyme® complies with the recommendations of the Food Chemical Codex IV for food grade enzymes. Other local regulations should always be consulted concerning the status of this product, as legislation regarding its use in food may vary from country to country.
